LITTLE CHANGE IN EPIDEMIC SITUATION

Physicians Presumably Too Busy to Report All New Cases—Eighteen Patients at Emergency Hospital—Quarantine at Mary Fletcher Hospital

There has been little change in the epidemic situation in Rutland during the last few days. The department reports one new case has been reported, but the name is unknown. Four new cases of small pox have been reported by the state health officer, Dr. Frank J. Flinn. He also stated that the physicians probably were not able to report all the cases of small pox.

There were 12 patients at the emergency hospital yesterday; some of them were admitted during the night, with preparations being made for their care. A total of 14 patients were examined and admitted to the hospital. The patients are under the care of Dr. H. R. Waterhouse, in charge of the emergency hospital, and Dr. J. F. Porter, in charge of the regular hospital.

The Mary Fletcher hospital established a complete quarantine yesterday, after several days of preparation. The hospital is now under the care of the local health department. The patients are under the care of Dr. H. R. Waterhouse, in charge of the emergency hospital, and Dr. J. F. Porter, in charge of the regular hospital.

The health report of the school at the University of Vermont yesterday showed that there are now new cases of small pox being reported. The treatment with the new vaccine is almost complete.

Dr. Charles F. Dalton, secretary of the state board of health, was in Rutland yesterday morning to report the progress of the vaccination. He stated that the state board is now in charge of the vaccination program.

The state board of health has prepared instructions on how to properly administer the vaccine. These instructions are as follows:

1. Cut the material into strips six inches long and four inches wide.
2. Fold the material into a strip and make sure that the thickness is sufficient.
3. Cut the material into a strip and make sure that the thickness is sufficient.
4. Cut the material into a strip and make sure that the thickness is sufficient.
5. Wet the material and spread it out on the table. Use the top tape to hold the material in place.
6. When the material is completely dry, trim the edges and make sure that the thickness is sufficient.
7. Use the bottom tape to hold the material in place. Trim the edges and make sure that the thickness is sufficient.
8. Use the bottom tape to hold the material in place. Trim the edges and make sure that the thickness is sufficient.
9. Use the bottom tape to hold the material in place. Trim the edges and make sure that the thickness is sufficient.
10. Use the bottom tape to hold the material in place. Trim the edges and make sure that the thickness is sufficient.

Many people have asked the state board of health for instructions on how to make a mask. The instructions are as follows:

1. Cut the material into strips six inches long and four inches wide.
2. Fold the material into a strip and make sure that the thickness is sufficient.
3. Cut the material into a strip and make sure that the thickness is sufficient.
4. Cut the material into a strip and make sure that the thickness is sufficient.
5. Wet the material and spread it out on the table. Use the top tape to hold the material in place.
6. When the material is completely dry, trim the edges and make sure that the thickness is sufficient.
7. Use the bottom tape to hold the material in place. Trim the edges and make sure that the thickness is sufficient.
8. Use the bottom tape to hold the material in place. Trim the edges and make sure that the thickness is sufficient.
9. Use the bottom tape to hold the material in place. Trim the edges and make sure that the thickness is sufficient.
10. Use the bottom tape to hold the material in place. Trim the edges and make sure that the thickness is sufficient.

The mask should be worn with the nose in the front of the mask and the mouth in the back. The mask should be worn with the nose in the front of the mask and the mouth in the back. The mask should be worn with the nose in the front of the mask and the mouth in the back. The mask should be worn with the nose in the front of the mask and the mouth in the back. The mask should be worn with the nose in the front of the mask and the mouth in the back.

CHARLES F. DALTON.
