Dr. Blue Describes Disease Symptoms
And Its Treatment

SURGEON GENERAL SAYS "GO TO BED; STAY THERE UNTIL BETTER; INDOOR UNTIL WELL."

BY JOHN L. MURRAY

WASHINGTON, September 28.—Spanish Influenza has spread over the country, affecting the public health service, war and navy departments and Red Cross, and has caused many local communities in the United States and Canada to take steps to combat the disease.

Surgical General Dr. Bliss of the War Department, in a dispatch to the Surgeon General, said that recent reports showed the disease was particularly prevalent in the twenty-six states from the Mississippi to the South Atlantic, and in New England.

Surgeon General, appearing before the House committee on public health, said that about 2,000,000 cases of Spanish influenza had been reported in the country. It has also been reported in the United States and the South Atlantic, East of the Mississippi river, and has not been found in the West.

The Surgeon General reported from the Surgeon General's office, and brought the total for all cases of Spanish influenza in the United States to 2,000,000.

Influenza is a disease of the respiratory system, and the case is often accompanied by fever, headache, cough, sore throat, and occasionally by a rash on the body.

The treatment of the disease is simple. The patient should be kept in bed, and should use as much air as possible.

The Surgeon General recommended that all persons with symptoms of the disease should be kept in bed, and that all persons with symptoms of the disease should be kept in bed.

Massachusetts Appropriates $1,000,000 to Fight Influenza

Schofield Barracks, September 28.—The Surgeon General, in a dispatch to the Surgeon General, said that about 2,000,000 cases of Spanish influenza had been reported in the country. He said that the disease was particularly prevalent in the twenty-six states from the Mississippi to the South Atlantic, and in New England.

The Surgeon General reported from the Surgeon General's office, and brought the total for all cases of Spanish influenza in the United States to 2,000,000.

Influenza is a disease of the respiratory system, and the case is often accompanied by fever, headache, cough, sore throat, and occasionally by a rash on the body.

The treatment of the disease is simple. The patient should be kept in bed, and should use as much air as possible.

The Surgeon General recommended that all persons with symptoms of the disease should be kept in bed, and that all persons with symptoms of the disease should be kept in bed.

The Surgeon General said that the disease is spread by the germs of the disease, and that the disease is spread by the germs of the disease.

The Surgeon General said that the disease is spread by the germs of the disease, and that the disease is spread by the germs of the disease.

The Surgeon General said that the disease is spread by the germs of the disease, and that the disease is spread by the germs of the disease.
