

# FEWER DEATHS IN INFLENZA EPIDEMIC HERE

Number of New Cases Above  
Yesterday's—Figure, but  
Many Are of Mild Type.

## NEW HOSPITAL IS OPENED.

More influenza cases, but fewer deaths than influenza and pneumonia, which together with typhoid fever, are the most common causes of death in the city. In the morning 28 cases of influenza and 10 cases of pneumonia were reported. Three deaths were reported. The influenza cases are of the mild type, but the pneumonia cases are of the severe type.

Three deaths have occurred in the past few days, while influenza and a combination of pneumonia and influenza are the most common causes of death. The influenza cases are of the mild type, but the pneumonia cases are of the severe type. The influenza cases are of the mild type, but the pneumonia cases are of the severe type.

## 'HYSTERICAL' CASES

While there are many cases of influenza, there are also many 'hysterical' cases. These are cases of people who make a bad of influenza. They have been struck with the influenza which comes with the epidemic.

The influenza epidemic has caused an emergency hospital to be opened. The hospital is now open. The hospital is now open. The hospital is now open.

The greatest demand for influenza medicine has come from the subject of influenza surrounding Pittsburgh. Almost without exception these influenza depend upon Pittsburgh to take care of any emergency. The influenza epidemic has caused a large amount of influenza medicine to be used.

Influenza has been spread through the city through Dr. Karl Schaffner of the Department of Health, Monacahele and Bradburn to take charge of the influenza epidemic. The influenza epidemic has caused a large amount of influenza medicine to be used.

The influenza epidemic has caused a large amount of influenza medicine to be used. The influenza epidemic has caused a large amount of influenza medicine to be used. The influenza epidemic has caused a large amount of influenza medicine to be used.
